Activity 1 This is a virtual lab that you can drag the test tube to each test to see how different elements react and how scientists help identify an element. Watch the short video first to see them explain the four main tests you will be trying and what you should notice. The four main tests are density, flame test, melting point, and boiling point. Write down the observation of each 4 tests on a piece of paper and figure out what element it would be by looking at the four things you wrote down about each element. You will drag the test tube through each test (while writing down what you got) and then click on the element you think it might be, from looking at their chart they have posted. When you click on the element, it will tell you whether you are correct or not. Then try	n/a	Activity 2 You will go to Brain Pop and watch the "Compounds and Mixtures" video, and then take the quiz.
